

## Introduction

CLE is an [Eclipse](#) plugin intended to edit grammar specification files used by [CUP](#) and scanner specification files used by [JFlex](#).

CLE is able to generate the Java source files starting from such specification files.

## Requirements

Starting with version 0.1.8, CLE supports only the version 3.4 of Eclipse. Previous versions of Eclipse might work but they haven't been tested.

CLE runs on JavaSE-5.0.

## Installation

**Questo a me non ha funzionato**

CLE can be installed using the Eclipse Update Manager from [CLE Eclipse Update Site](#). For step by step instruction check the [documentation](#).

You can also download the ZIP archive from [SourceForce download area](#) and extract it directly into the home of your Eclipse installation (or if you preferred, into the dropins directory).
